

When Rental Complexity Becomes Operational Clarity

Embedded inside Epicor Kinetic, RMS brings structure, automation and revenue control to complex, asset-intensive rental operations.

BISCIT's Rental Management System (RMS) is purpose-built for organisations that rent serialized, high-value equipment and require more complex and recurring billing structures.

Fully embedded within, and purpose built for Epicor Kinetic, RMS delivers complete lifecycle visibility, recurring billing, maintenance triggers and flexible pricing capabilities, ensuring operational precision while protecting margins.

From proposal through dispatch, return and revenue recognition, RMS replaces manual workarounds with embedded efficiencies.

Key Benefits

Dynamic Pricing

Apply flexible commercial terms at the proposal and agreement levels to support contract-based rentals that require complex pricing.

Category-Based Proposals

Empower sales teams to propose equipment categories rather than locking unique serial numbers upfront, allowing equipment allocation throughout the process.

Asset Status Tracking (or control)

Maintain visibility into asset location, status, and availability to prevent double-booking and revenue loss.

Structured Rental to Revenue Control

Convert proposals into rental agreements and execute billing in line with agreed terms. RMS standardises how rental agreements are created, executed and invoiced, reducing manual handoffs, ensuring each change is captured and recorded.

Rental Management Made Simple

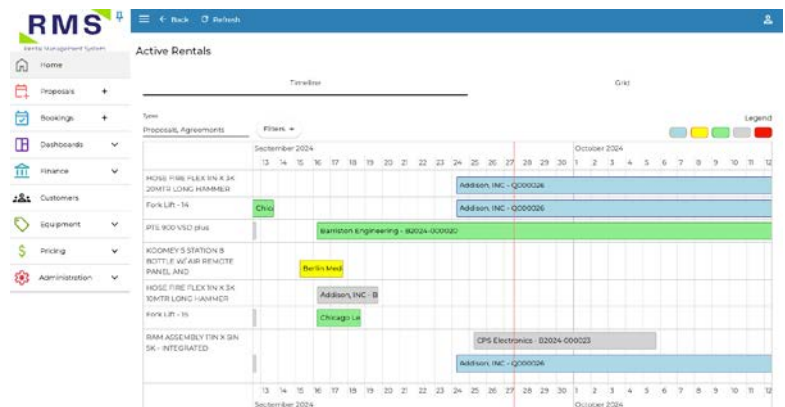

Rental operations often sit outside core ERP workflows, creating duplicate data entry, disconnected equipment records and manual document processes that increase risk and administrative overhead.

RMS, embedded within Epicor Kinetic, brings rental activity directly into the core ERP environment, consolidating proposals, bookings, dispatch, invoicing and equipment records into a single operational flow.

By removing fragmentation and manual workarounds, organisations reduce operational effort, eliminate integration risk and execute rental agreements with accuracy and discipline.

Rental Intelligence

- Utilisation & Revenue Reporting
- Leverage Epicor dashboards to analyse fleet performance, utilisation rates and revenue contribution.
- Identify underperforming assets.
- Support expansion decisions with data.
- Use data to help optimise pricing strategy.

Simple User Interface

Comprehensive yet easy-to-use, intuitive interface allowing easy navigation and fast adoption.

Agreement Invoice History

Access Invoice history and balance summary from within agreements. Easily identify unbilled activity.

Revenue Protection

Reduce leakage through streamlined and efficient billing, maintenance triggers and lifecycle traceability.

Miscellaneous Charges

Flexible supplementary charges at both booking and agreement level, ensuring all charges are captured and billed accurately.

Why BISCIT?

With over 20 years as an Epicor partner and over a decade of experience in Epicor-centric rental solutions, BISCIT specialises in embedded applications that extend Epicor Kinetic without increasing complexity.
