

BISCIT Delivery Planning (BDP) For Kinetic

BISCIT Delivery Planning, designed for Epicor Kinetic ERP streamlines delivery planning with ease.

The screenshot displays the BISCIT Delivery Planning (BDP) software interface. The left sidebar contains navigation options: Home, Dock Management, Route Management, Vehicle Management, Settings, and Logout. The main content area shows the 'Dispatch Board / View Run' for a specific plant (9500 E 55th St Raytown MO 64133 USA). It displays run details, travel time, and a list of deliveries with their status (Packed). A map on the right shows the delivery route across the United States.

If you love Epicor Kinetic Warehouse (EKW), then you will love BDP

Features

- Full visibility and control over delivery planning.
- Drag-and-drop interface for quick rescheduling of deliveries.
- Flexible delivery management, including remote route options.
- Efficient route optimization with integrated map view.
- Capability to manually adjust routes.
- Route cost and time visibility.
- Streamline outbound shipments with smart dock scheduling.
- Order visibility for efficient customer service.

Who it benefits

BDP enhances delivery planning and route optimization, benefiting planners, packers, shippers, and drivers by increasing efficiency. Increased order visibility and turnaround time improve customer service.

Embedded not integrated

Unlike stand-alone solutions, BPD is embedded into Epicor Kinetic and leverages the experiences gained over half a decade of creating and deploying Epicor Kinetic Warehouse in over 1,500 Epicor sites across the globe. Embedded applications install and upgrade in minutes. They leverage Epicor's core architecture and do not require a separate database.
