

Advanced Unit of Measure (UOM)

Kinetic is an Enterprise Resource Planning (ERP) software program designed to help you become more productive.

Global pressures to keep costs low and serve customers' needs on tight margins have challenged manufactures and distributors to further reduce the cost of carrying inventory without compromising on delivery. A key factor to a successful business the ability to most accurately cost and forecast inventory while easing the pain of quickly locating the right inventory to meet the needs of the customer or production. Not only does the Advanced Unit of Measure (UOM) module offer a transactional dual unit of measure, it supports the complex needs of managing inventories dimensionally.

Many systems today can deliver this with complex implementations and ongoing time-consuming management of ERP. The benefit of Epicor Advanced UOM functionality is that it delivers a simplified approach to finding the right inventory by segmenting inventory with inventory attributes such as hardness, strength, modulus of elasticity, or density. Because the inventory is segmented, it is easily located, physical counts are more meaningful, and the business can plan inventory needs at the attribute level, ensuring accurate supply and demand are met.

Furthermore, Advanced UOM offers dynamic attributes to help businesses manage conversion between units of measure. For example, pounds or grams to feet, meters, or each. Both the theoretical size (4 meters length) and optional actual size (4.1 meters) can be converted to the accurate weight measures. This is powerful and useful in purchasing and selling in one unit of measure while managing inventory and production in another. Advanced UOM delivers these transactions in dual units of measure, giving greater visibility and accurate cost throughout with the simplicity of transacting in a number of pieces rather than counting out the weight or meters.

Attribute Tracking Stainless

Qty		
1	3x8 Sheet	12 gauge
3	4x8 Sheet	12 gauge
2	5x8 Sheet	14 gauge
5	6x8 Sheet	14 gauge
7	6x8 Sheet	16 garage

Dual Unit of Measure (UOM)

Qty		
1	4x8 Sheet Stainless	161.28 weight
5	5x7 Sheet Stainless	882 weight

Kinetic

Benefits

Reduce carrying costs with greater visibility of on-hand inventory

Find the right inventory faster for greater customer responsiveness

Improve inventory accuracy by transacting in dual units of measure throughout ERP

Less setup and ongoing maintenance of ERP speeds time to value

Improved planning of inventories in production activities

Better quality tracking at the attribute level

More accurately forecast inventory future needs

Cross-Industry Use

The functionality deployed in Advanced UOM can be used across many industries, not just metals but especially in metals where high-value inventory needs to be tracked more closely. Additional use cases include textiles, fabricated metals, landscaping (soil or gravel), packaging, furniture and fixtures, footwear, eyewear, sporting goods, and more.

Deeply Embedded in ERP

Advanced UOM offers deep capabilities across the entire ERP system including Quoting, Quantity Adjustments, Cycle Counting, MRP, Purchasing, Receiving, Material Queue, Part Tracker, Inventory Transfer, Material Issue, Job Receipt to Inventory, Salvage Receipt to Inventory, Available to Promise, Engineering, PCID, Order Fulfillment, Epicor Mobile Wireless Warehouse, and Customer Shipment Entry.

Attribute Sets

Easily set up and maintain sets of attributes across types of inventory to ease implementation and ongoing management of inventory dimensions. Attribute sets can be automatically or manually assigned to products in Quote Entry, Sales Order Entry, Purchase Order Entry, and Receipt Entry.

Replenishment by Attribute

Specify at the bin level replenishment goals for each attribute to help ensure the on-hand availability of inventory. MRP then builds purchase suggestions to help ensure the procurement of needed inventory.

MRP Planning with Attributes

Engineered products can be assigned specific attributes for semi-finished or finished goods. This is useful when applying value-added services. A bill of material for engineered products likewise can leverage materials with attributes. MRP accurately automates production based on demand and forecasts, ensuring material requirements with attributes are procured to meet the need.

Dual Units of Measure

Transact throughout ERP in two units of measure at the same time. Inventory Stock Status will demonstrate inventory availability by attribute in both units of measure. An example would be feet and pounds.

Cycle Count

More easily perform cycle counts by counting in whole units by attribute.

EPICOR

We're here for the hard-working businesses that keep the world turning. They're the companies who make, deliver, and sell the things we all need. They trust Epicor to help them do business better. Their industries are our industries, and we understand them better than anyone. By working hand-in-hand with our customers, we get to know their business almost as well as they do. Our innovative solution sets are carefully curated to fit their needs, and built to respond flexibly to their fast-changing reality. We accelerate every customer's ambitions, whether to grow and transform, or simply become more productive and effective. That's what makes us the essential partners for the world's most essential businesses.
